

For our US subsidiary in Boston (MA), we are looking for an experienced mechanical engineer with specific knowledge in miniature electromechanical systems for the position of:

### **TECHNICAL PROJECT MANAGER (mechanical engineering)**

#### **Tasks**

Working in close cooperation with the US sales organization and the development team in Switzerland, you will manage projects from the acquisition to the completion of the development. The sales team can count on your competent advice to convince the customer to choose MPS. Moreover, thanks to your communication skills, you will ensure a seamless exchange of information between the development team in Switzerland and the US clients. You advise customers and MPS engineers about the most suitable solution to the customer issue. You will challenge the technical solutions proposed by the R&D team and present concepts, study results, technical proposals, project plans and costs to customers. You will lead the MPS project team with the objective of providing the customer with the right solution within the time and cost constraints. Finally, you take an active role in providing any information of interest that could have an impact on MPS product development and marketing strategy as well as on MPS business.

#### **Profile**

We are looking for a mechanical engineer with deep knowledge in mechatronic systems and electronics, and who has at least 5 years of practical experience. You should be skilled in working with 3D CAD software, preferably Solidworks. You can work on your own, take the right decisions, evaluate technically challenging electromechanical systems, write technical reports and make clear presentations.

#### **Benefits of working for MPS**

At MPS, you will enjoy great autonomy and freedom. The company is known for its open-mindedness and pleasant work atmosphere. As a project manager, you will collaborate with some of the most innovative companies in the industry. In this stimulating international context, you will be at the forefront of new technology, working with our highly capable teams in R&D, process engineering and quality to develop new solutions that go beyond our customers' expectations. Lastly, you will be part of a dynamic and tireless group of motivated people who work together to push back the limits of what's possible and improve millions of people's lives.

#### **About MPS**

MPS is a Swiss based company employing more than 450 people. We are experts in designing and manufacturing tailor-made electromechanical microsystems that stand out for their reliability, high precision, and small size. MPS is a growing and cash-generating company that serves the medical, optical, semiconductor and defense markets.
